

TotalGest - How are the values expressed in % calculated?

In TotalGest, in the product's detail, in the services and in the price calculator, there are values calculated expressed in %. Here you'll find how we did it.

You can use the following automatic fields to calculate the different values.
(the automatic pdf works only if you open it with Adobe Acrobat Reader and not in the browser preview)

Purchase Price (PP)

1.00 CHF

enter prices
without VAT

Sales Price (SP)

3.00 CHF

Difference between sale price and purchase price (delta Δ):

$SP - PP = \Delta$

2.00 CHF

This value in CHF is also calculated within TotalGest. It is located near the increase and markup %.

At this point, with this value expressed in CHF, 2 new values expressed in % can be calculated

INCREASE

$(\Delta / PP) * 100$

200.00%

The increase rate compares the gross margin Δ at the PURCHASE price.

MARKUP

66.67%

$(\Delta / SP) * 100$

The markup rate compares the gross margin Δ at the SALES price.
